

ZYNXIS — App Navigation Flow

Screen hierarchy and data passed between routes

Each page (Home / About / Services / Task Manager) returns to Dashboard via the system/app-bar back button (Navigator.pop)

—————> push / pushReplacement (forward navigation) - - - - -> logout (pushReplacement back to Login)

Data passed: Login Page reads the TextField value and passes it as DashboardPage(username: username).
Dashboard interpolates it directly in the UI: 'Welcome, \$username'.
